

Meeting Recap – Weekly Connect (Crumbella Project)

Meeting Context

Purpose:

Sinkronisasi PRD, validasi user flow (order & email parsing), serta alignment kebutuhan sistem sebelum development lanjut lebih jauh.

Participants:

- Uplift Team (PM: Roger, Iam)
- Engineer Team (Icam, Ornest, Dimas)
- Client (Crumbella – Feli & team)

Key Discussion Points

1. PRD & User Flow Alignment

- Flow **email parsing (Tokopedia/Shopee)** dikonfirmasi:
 - Sama dengan admin input, hanya berbeda di step awal.
 - Sistem akan:
 - Parse email → generate draft order → admin approve.
- PRD perlu di-update untuk memasukkan flow ini secara eksplisit.

2. Print Label / Resi Feature

- Dibutuhkan fitur:
 - Klik order → **print label (nama, alamat, no HP, metode pengiriman)**.
- Preferensi:
 - Bisa print via **thermal printer (seperti resi JNE)**.
- Format fleksibel (tidak ada standard dari client).

3. Order & Calendar Logic (CRITICAL)

- Flow baru dari sisi bisnis:
 - Customer isi data awal (nama, no HP, alamat, tanggal & jam)
 - Admin cek **availability slot (calendar)**
 - Jika available → lanjut order

- Jika tidak → reschedule
 - Requirement tambahan:
 - **Slot limit per jam** (contoh: max 10 delivery/jam)
 - **Hari libur harus di-block (tidak bisa order)**
 - Fokus pada **tanggal & jam pengiriman (bukan produksi)**
-

4. Product Structure Complexity

Struktur produk cukup kompleks dan perlu diperhatikan:

- Hierarki:
 - Category (cake, cookies, hampers, dll)
 - Subcategory (contoh: cake → regular / tall / tiered)
 - Add-ons (per kategori, tidak global)
 - Special case:
 - Cookies → berdasarkan **tingkat kesulitan (simple/detail)**
 - Engineer diminta design **data structure fleksibel & scalable**
-

5. Multi-Item & Multi-Address Order

- 1 order bisa:
 - Berisi **multiple produk (beda kategori)**
 - Special case:
 - 1 payment → **multiple alamat pengiriman**
 - Tetap 1 invoice
 - Bisa dipecah jadi multiple delivery data
-

6. Pricing Components

Komponen harga dalam order:

- Product price
- Add-ons

- Ongkir (manual / by system)
- Future: service fee (opsional)

Flow:

- Data awal → cek slot → finalize order → hitung total → payment

7. Delivery Pricing (External Integration)

- Saat ini menggunakan:
 - Paxel
 - JNE
- Pricing:
 - Manual dari website
- Possible improvement:
 - Integrasi API (jika tersedia)

8. Inventory & Ingredient System (Optional Feature)

- Engineer sudah menyiapkan:
 - Ingredient tracking
 - Auto deduction berdasarkan recipe
- Bisa digunakan untuk:
 - Stock bahan baku
 - Integrasi dengan COGS
- Status: **Optional (client tertarik)**

9. UI Progress (Preview)

- Sudah ada initial UI:
 - Dashboard (total order, upcoming delivery)

- Order list
 - Create booking
 - Order detail & approval
 - Next:
 - Tambah flow sampai delivery selesai
 - Integrasi WA parsing
 - Kalender view (requested)
-

10. Calendar View Requirement

- Client prefer:
 - Ada tampilan **kalender (mirip Google Calendar)**
 - Masih open:
 - Custom calendar vs integrate Google Calendar
-

11. Data & Documentation Alignment

- Semua data akan disatukan di:
 - Google Drive project
 - Termasuk:
 - PRD
 - Progress report
 - Recording meeting
 - Data client
-

12. Meeting Schedule Update

- 2 meeting berikutnya **di-skip (Lebaran)**
- Next meeting:
 - **Kamis, tanggal 26**

Decisions

1. Flow **email parsing** masuk ke PRD (perlu update).
2. Sistem menggunakan **slot-based delivery (per jam)**.
3. Hari libur akan **di-block di sistem (no booking)**.
4. Order bisa:
 - Multi product
 - Multi address (1 payment)
5. Fitur **print resi** akan dibuat (format fleksibel).
6. Struktur produk harus support:
 - Category, subcategory, add-ons, complexity level
7. Ingredient system:
 - Tidak mandatory, tapi disiapkan
8. Kalender:
 - Akan dicoba dibuat (opsi custom vs Google Calendar masih open)

Action Items

Action	PIC	Deadline
Update PRD (email parsing, calendar logic, slot logic, multi-address)	Roger	Before next meeting
Share meeting recording & recap	Roger	After meeting
Export 1 full WhatsApp order history (text format)	Feli (Crumbella)	ASAP
Provide delivery schedule rules (jam operasional & slot limit)	Feli (Crumbella)	ASAP
Provide area delivery data & pricing reference	Feli (Crumbella)	ASAP
Provide WA group link (tim produksi)	Feli (Crumbella)	ASAP

Consolidate data ke shared Google Drive	Feli + Roger	ASAP
Design data structure (product, add-on, multi-address)	Engineer Team	Next sprint
Implement slot-based calendar logic	Engineer Team	Next sprint
Explore API integration (Paxel/JNE)	Engineer Team	Next phase
Develop print label / resi feature	Engineer Team	Next sprint
Continue UI development (order → delivery flow)	Engineer Team	Ongoing
Explore WA parsing & notification automation	Engineer Team	Ongoing

Next Steps

1. Update PRD sesuai hasil meeting
2. Lengkapi data dari client
3. Engineer:
 - Finalisasi struktur data
 - Lanjut development core logic
4. Prepare demo untuk next meeting

Next Meeting:

Kamis, 26 (setelah Lebaran)
